

Report of the Colorado State Engineer

**Concerning Accounting of the Operations
of an Offset Account in John Martin Reservoir
for Colorado Pumping**

1998

Submitted to the
Operations Committee
Arkansas River Compact Administration

December 1, 1998

Report of the Colorado State Engineer

Offset Account Operations

November 1, 1997 to October 31, 1998

An Offset Account in John Martin Reservoir was authorized by the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping** dated March 17, 1997 ("Resolution") and by the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Amended Resolution").

This report summarizes the operations conducted using the Offset Account for the period November 1, 1997 through October 31, 1998 and has been prepared pursuant to paragraph 11 the Amended Resolution.

At 0000 hours, November 1, 1997 the Offset Account contained 5356.98 acre-feet. From then until January 17, 1998, when the Offset Account completed spilling from John Martin Reservoir, there were no deliveries to or releases from the Offset Account. In accordance with paragraph 9 of the Amended Resolution, the Colorado State Engineer and the Kansas Chief Engineer agreed that the 500 acre-feet of fully consumable water that must be delivered by Colorado or Colorado water users to the Offset Account as a prerequisite for deliveries to the Offset Account could be delivered at a time after April 1, 1998. From June 28 through June 30, 1998, 500 acre-feet of fully consumable water was delivered to the Offset Account to satisfy the Storage Charge prerequisite for using the account. Copies of the correspondence to determine the date of this delivery are included in Section 3.

The other operational considerations modified by the Amended Resolution were the provisions for determining net depletions to usable Stateline flows described in paragraph 5B of the Amended Resolution.

In Section 1, a monthly summary of the contents of the Offset Account is provided in Table 1. A summary of the subaccounts of the Offset Account is provided in Tables A through B.2. The outline preceding the tables in Section 1 provides an explanation of the purpose of each subaccount.

Section 2 of this report contains the daily accounting records, by month, for all subaccounts in the Offset Account.

From November 1, 1997 through October 31, 1998, there were three deliveries of water to the Offset Account, including the delivery of 500 acre-feet of fully consumable water to satisfy the Storage Charge. These deliveries are summarized in the following table.

Source	Delivery End Date	Net to Offset Account (ac-ft)	Net Consumable Water (ac-ft)	Net Return Flow Water (ac-ft)
LAWMA (Colorado Springs Utilities)	June 30, 1998	500	500	0
LAWMA (Colorado Springs Utilities)	July 2, 1998	853.76	853.76	0
LAWMA (Highland Canal Shares)	October 31, 1998	3711.43	3551.83	159.6
TOTALS		5065.19	4905.59	159.6

During the period referred to above, there have been no releases of water from the Offset Account directed by the Kansas Chief Engineer. As indicated above, the entire contents of the Offset Account at that time were spilled during the period January 14 through January 17, 1998.

Section 3 of this report provides copies of the letters reporting each delivery of water to the Offset Account as required by paragraph 3 of the Amended Resolution.

Section 4 of this report provides copies of the monthly letters reporting Colorado pumping and Offset Account operations that were prepared and submitted in accordance with paragraph 12 of the Resolution and the Amended Resolution.

The Colorado State Engineer and the Kansas Chief Engineer have coordinated Offset Account operations successfully through their respective delegates throughout the year. Colorado continues to solicit suggestions and desires to fully discuss any measures that might have the effect of minimizing Kansas' cost of monitoring use of the Offset Account to facilitate Compact compliance.

Hal D. Simpson for
 Hal D. Simpson
 Colorado State Engineer

SECTION 1

Outline of Tables

Offset Account (Table 1)

Contains a monthly summary of the total contents of the Offset Account.

A. Consumable Water (Table A)

1. Colorado Upstream Consumable Water (Table A.1.)

Contains a monthly summary of the water stored under the provisions of paragraph 6 of the Amended Resolution.

2. Colorado Downstream Consumable Water (Table A.2.)

Contains a monthly summary of the consumptive use water stored by Colorado users which has not yet been made available to replace depletions to usable stateline flow and therefore has not been transferred to Kansas as provided for in paragraph 5.B. of the Amended Resolution.

3. Kansas Consumable Water (Table A.3.)

Contains a monthly summary of the consumptive use water that has been made available to replace depletions to usable stateline flow and has therefore been transferred as provided for in paragraph 5.B. of the Amended Resolution.

4. Kansas Storage Charge (Table A.4.)

Contains a monthly summary of the consumptive use water delivered to the Offset Account under the provisions of paragraph 9 of the Amended Resolution.

B. Return Flow Water (Table B)

1. In State Return Flow Water (Table B.1.)

Contains a monthly summary of the return flow water which must be released to the river to maintain the return flows to Colorado water users because of deliveries of water historically used for irrigation to the offset account.

a. In State Upstream Return Flow Water (Table B.1.a.)

Contains a monthly summary of return flow water which must be released to John Martin Reservoir during periods of conservation storage to maintain return flows to conservation storage by the deliveries to the Offset Account of direct flow irrigation water from ditches above John Martin Reservoir.

b. In State Downstream Return Flow Water (Table B.1.b)

Contains a monthly summary of return flow water which must be released to the river to provide for the return flows to Colorado water users below John Martin Reservoir because of the deliveries of water historically used for irrigation to the offset account.

2. State Line Return Flow Water (Table B.2)

Contains a monthly summary of return flow water which must ultimately be released to the river to maintain the return flows to the river reaches below any Colorado water users under the provisions of paragraph 4 of the Resolution.

Dear Mr. Simpson:

Thank you for your letter dated April 1, 1998, regarding the storage of 500 acre-feet of fully consumable water in Lake Meredith for the subsequent delivery to the offset account in John Martin Reservoir after April 1, 1998, in accordance with the recent amendment of the Offset Account resolution.

I agree with the proposal and am returning for your records a signed copy of your letter dated April 1, 1998, setting forth the conditions of the proposal.

Thank you very much.

Sincerely yours,

David L. Pope, P.E.

RE: Delivery of 500 Acre-Feet to the Offset Account

Dear David:

In accordance with paragraph 9 of the Offset Account Resolution, as amended March 30, 1998 pursuant to action at the Special Arkansas River Compact Administration meeting on March 25, the Lower Arkansas Water Management Association ("LAWMA") has offered to deliver 500 acre-feet of fully consumable water stored in Lake Meredith to the Offset Account after April 1 on the following terms:

1. The water will be released from Lake Meredith and delivered to the Offset Account at a time after April 1 when the Division Engineer for Water Division 2 (Steve Witte) and the Water Commissioner for the Garden City Field Office (Mark Rude) agree that the risk that the 500 acre-feet will spill has passed, taking into consideration river flows upstream from John Martin Reservoir, snow pack in the Arkansas River Basin in Colorado, and reservoir content; provided that if the water has not been earlier released as provided above, the water shall be released from Lake Meredith and delivered to the Offset Account as soon after August 15, 1998 as space is available in John Martin Reservoir and the Reservoir is not spilling;
2. In addition to the 500 acre-feet of fully consumable water stored in Lake Meredith, LAWMA will provide sufficient water for transit losses to deliver the water to John Martin Reservoir.

David L. Pope
April 1, 1998

Page 2

This proposal for delivery of the 500 acre-feet after April 1 is acceptable to me. If you agree with this proposal, please confirm your agreement as soon as possible.

Very truly yours,

Hal D. Simpson
State Engineer

MEMORANDUM

DATE: June 23, 1998

TO: Mr. Mark Rude, Water Commissioner, Garden City Field Office

FROM: Steve Witte, Division Engineer
Division 2

RE: Delivery to Offset Account

This is to confirm that through a telephone conversation held this date we agreed that the risk of spill of the 500 acre-feet required as the Offset Account Storage Charge for 1998 has passed after having considered the various factors proposed in Hal Simpson's letter dated April 1, 1998 which was accepted by David Pope dated April 7, 1998.

I anticipate initiating actions to cause deliveries of the storage charge and other consumable water to the Offset Account in the near future. These actions will be documented as required by the Amended Offset Account Resolution.

Please indicate your confirmation of the foregoing by signing below and returning the original to me for my files.

RE: Notice of Delivery to the Offset Account in John Martin Reservoir

Dear Mr. Pope:

The purpose of this letter is to provide the notice required by paragraph 3 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Resolution") of a delivery of water to the Offset Account.

The Lower Arkansas Water Management Association (LAWMA) has initiated actions to deliver **500 acre-feet** of fully consumable water to the Offset Account for the purpose of satisfying the Storage Charge prerequisite for using the Offset Account as provided for in paragraph 9 of the Resolution. The provisions in the April 1, 1998 letter from Hal Simpson to you concerning the delivery to the Offset Account of this water after April 1, 1998 have also been complied with. Also, LAWMA has initiated actions to deliver an additional **853.76 acre-feet** of fully consumable water to the Offset Account for the purpose of replacing depletions to usable stateline flow caused by the operations its replacement plan approved under the provisions of Rule 14 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") and other substitute water supply plans operated by LAWMA. The total quantity to be delivered during this operation is **1353.76 acre-feet**.

LAWMA has purchased water from Colorado Springs Utilities and has initiated a release of that water from Lake Meredith. A copy of the purchase agreement is attached at Enclosure 1. The timing and quantities are described below. This is the same type of water described in the letter provided previously by Colorado Springs Utilities and attached at Enclosure 2.

The following information is provided in accordance with paragraph 3 of the Resolution.

Source of Water Delivered: Colorado Springs Utilities water from Lake Meredith.

Times Associated With Delivery

Release Initiated At: 1200 hours, 26 June, 1998

Release Terminates At: 1200 hours, 30 June, 1998

Arrival Starts at John Martin Reservoir: 1500 hours, 28 June, 1998
Arrival Finishes at John Martin Reservoir: 1500 hours, 2 July, 1998

Flow Rates Associated With Delivery (See Enclosure 3)

Release Flow Rate: 211.37 cfs
Arrival Flow Rate at John Martin Reservoir: 170.63 cfs

Extent Water is Fully Consumable:

Fully consumable water sold by Colorado Springs Utilities to LAWMA.

Return Flow Information

Quantity: Not Applicable
Timing: Not Applicable
Location: Not Applicable

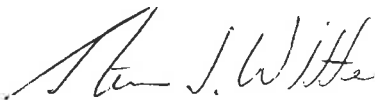

Please provide your instructions for the disposition of the water being delivered as Storage Charge Water.

- Release to River
 Transfer to Kansas Article II Account
 Retain in Offset Account

Also, please provide your instructions for the disposition of the other fully consumable water being delivered.

Please contact me if you have any questions or require additional information.

Sincerely,

Steven J. Witte
Division Engineer
Colorado Division of Water Resources

AGREEMENT FOR THE PURCHASE OF WATER

THIS AGREEMENT is made and entered this 17 day of April, 1998 by and between Colorado Springs Utilities, hereinafter called "CSU", and Lower Arkansas Water Management Association hereinafter called "LAWMA."

WITNESSED

WHEREAS, LAWMA requires releases of water to the Arkansas River for delivery to the Kansas State line to offset depletions of ground water resulting from post 1985 well users well pumping.

WHEREAS, LAWMA desires to purchase reusable water from CSU in 1998 to be used to offset depletions caused by members' wells.

WHEREAS, LAWMA desires to make available CSU's reusable water from its available water sources to the Division 2 Engineer in 1998 for well depletions caused by LAWMA members' wells.

WHEREAS, in 1998 CSU agrees to release reusable water from one or a combination of the following sources: Lake Meredith, Pueblo Reservoir, and Reusable Return Flows on Fountain Creek, for delivery to the Arkansas River by LAWMA.

WHEREAS, pursuant to the State Engineer's March 27, 1998 approval of LAWMA's replacement plan, LAWMA is required to deliver 500 acre-feet of consumable water to the Offset Account in John Martin Reservoir for Colorado's obligation of Storage Charge Water.

AGREEMENT

NOW, THEREFORE, IT IS AGREED:

1. CSU agrees to sell to LAWMA 1,677 acre-feet of reusable water delivered to the Arkansas River from Lake Meredith, and/or Pueblo Reservoir, and/or Reusable Return Flows on Fountain Creek between March 15, 1998 and November 15, 1998.
2. Cost per acre-foot and cumulative minimum delivery amounts shall be set according to the following schedule:

<u>Cost per acre-foot</u>	<u>Schedule Date</u>	<u>Cumulative Min. Delivery</u>
\$ 6.00 per acre-foot	March 15, 1998 - June 30, 1998	1,677 acre-feet
\$ 8.00 per acre-foot	July 1, 1998 - September 30, 1998	
\$ 10.00 per acre-foot	October 1, 1998 - November 15, 1998	

Water for Brad Cummings Irrigation, Carder, Inc. Gravel Pit, Midwestern Farms Resources Gravel Pit, Prowers County Gravel Pit, Justin Young, Jr. Wildlife Ponds, and

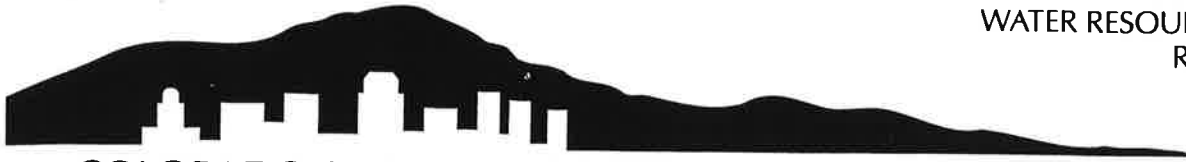

Enclosure 1

- attached Exhibit A. The schedule may be modified by ten (10) business days prior notice.
3. CSU agrees to release this reusable water at an approximate flow rate of 60 cfs from Lake Meredith, and/or Pueblo Reservoir, and/or Reusable Return Flows on Fountain Creek between March 15, 1998 and November 15, 1998, not to exceed a total of 1,677 acre-feet.
 4. The water sold hereunder shall be measured at the Lake Meredith outlet, and LAWMA shall be responsible for all transit losses associated with the delivery of this water from that point.
 5. LAWMA agrees to take or pay for 1,677 acre-feet of reusable water at a minimum payment of \$10,062 (Ten Thousand and Sixty Two Dollars) upon receipt of an invoice from CSU. An additional invoice will be sent to LAWMA following final delivery of said water. This invoice shall reconcile the time of the actual amount of water delivered and associated charges as set forth in Paragraph 2 above and the initial \$10,062 payment by LAWMA to CSU.
 6. CSU is not obligated to extend or renew this contract or deliver reusable water beyond November 15, 1998. LAWMA and CSU acknowledge and agree that this sale is based upon the circumstances now existing. This Agreement shall in no way obligate CSU at any future time to provide water for LAWMA's use after November 15, 1998.
 7. LAWMA is responsible for obtaining approval by the State Engineer or Division 2 Engineer, as well as all other necessary approvals required for delivery of this water for LAWMA's intended uses from Lake Meredith, Lake Henry, and Pueblo Reservoir.
 8. Delivery of this water must be coordinated with the Division 2 Engineer, Mr. Allen Ringle of the Colorado Canal Company, and Mr. Scott Howell of CSU. A one-day notice must be provided to Mr. Ringle and Mr. Howell prior to beginning delivery of this water.
 9. CSU makes no warranty as to the water quality of delivered water to LAWMA for its intended use as detailed above.
 10. CSU will not be obligated to sell water under this Agreement if in CSU's sole judgment such water is required to supply the needs of CSU.
 11. All water furnished under this agreement by CSU shall be for one time use only.
 12. The water furnished under this agreement shall not be used for future residential development.
 13. This Agreement contains the entire understanding between parties, no modification, amendment, notation, or other alteration to this Agreement shall be valid of any force or effect unless mutually agreed to by the parties in writing as an addendum to this Agreement. At the time of the Execution of the Agreement, there are no other terms, conditions, requirements, or obligations affecting this Agreement, which are not specifically set forth herein.

Dear Mr. Witte:

Colorado Springs Utilities has agreed to sell fully reusable Colorado Canal Consumptive Use waters from our account in Lake Meredith, to the Lower Arkansas Water Management Association (LAWMA). This water is scheduled to be released from Lake Meredith between March 26 and April 1, 1997, and then stored in the Off Set Account in John Martin Reservoir.

Should you have any further questions, please feel free to contact me at (719) 448-8720.

RE: Notice of Delivery to the Offset Account in John Martin Reservoir

Dear Mr. Pope:

The purpose of this letter is to provide the notice required by paragraph 3 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Resolution") of a delivery of water to the Offset Account. This letter provides the monthly reporting of deliveries to the Offset Account from the Lower Arkansas Water Management Association (LAWMA) shares of the Highland Irrigation Company using the procedures described in my letter of August 25, 1997 which provided the initial notice of the delivery of water from this replacement source. This is the first of the monthly reports of deliveries from the Highland Canal to be provided in 1998 and covers the period from the initiation of deliveries on July 11, 1998 through the end of July, 1998. Reports will be provided on a monthly basis for each month when deliveries are made.

Enclosure 1 contains the accounting spreadsheet of deliveries from the Highland Canal for the month of July. The format of this spreadsheet is provided and described in my letter of August 25, 1997. Enclosure 2 contains the accounting sheets for the Offset Account for July which reflect the delivery of the quantities reported in Enclosure 1 to the appropriate subaccounts of the Offset Account. Enclosure 3 is an update of the discharge rating tables which were provided in my letter of August 25, 1997.

The following table summarizes the delivery of water into the Offset Account during the reporting period. As stated in my August 25, 1997 letter, the return flow water is being stored in the Offset Account for delivery to conservation storage in John Martin Reservoir during the months of December (1998) and January (1999).

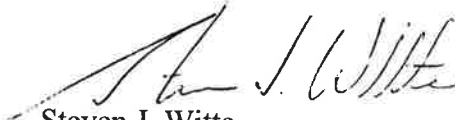

MONTH	C. U. Water (ac-ft)	Return Flow (ac-ft)
July	477.61	21.43

Please contact me if you have any questions or require additional information.

David L. Pope

Subject: Discharge Rating Table for Slide Gate
at Wasteway No. 3 – Highland Canal

Dear Don:

Enclosed is the revised rating table (28 pages) for the gate at Wasteway No. 3 on the Highland Canal. This table replaces the rating table (July 7, 1997) used last year.

On May 6, 1998, we measured the discharge through the gate in the channel leading to the Purgatoire River. Following is a summary of those measurements as well as the measurements made in 1997:

<u>Date</u>	<u>Gage Height (feet)</u>	<u>Gate Setting (inches)</u>	<u>Discharge (cfs)</u>	<u>Coefficient, C</u>
5/6/98	1.52	52.75	16.6	0.699
5/6/98	1.46	51.00	22.3	0.700
5/6/98	1.18	47.75	33.4	0.731
7/2/97	0.415	56.00	4.98	0.675
7/2/97	0.20	55.25	6.88	0.675
7/2/97	0.08	54.50	7.49	0.577

Discharge through an orifice can be estimated using the following equation:

$$Q = CA\sqrt{2gH}$$

- Where Q = discharge in cfs
- A = area of the orifice, square feet
- S = acceleration due to gravity, 32.2 feet per second²
- H = measured head, feet
- C = discharge coefficient

In this case, the area, A, of the orifice is calculated as follows:

Enclosure 3

Mr. Donald F. Higbee
May 14, 1998
Page 2

$$A = \frac{(57.75 - G) \times W}{144}$$

where G = Gate setting, inches
W = Width, inches

The width of the gate opening is 40.25 inches. Due to the installation of new wooden gate frame this spring, the width is 1 inch narrower than the width measured last year. The gate setting is measured from the top of the gate leaf to the top of the gate frame. When the gate is closed, the distance is 57.75 inches.

The measurements were used to calculate the discharge coefficients by rearranging the orifice equation. The discharge coefficient for the 6 measurements averaged 0.68 which is slightly larger than the coefficient derived from last year's measurements. The values shown in the rating table reflect the adjustment to the discharge coefficient and the width of the gate.

Walter described a problem with the rating table used last year when the gage height was less than 0.3 feet and the gate opening was fairly large. At this gate height, the flow passing down-ditch was very small, probably 1 to 2 cfs. I expect that there was considerable turbulence at the gate with this small head. I recommend that in similar circumstances Walter should calculate the discharge through the gate by the following procedure:

1. Record the 5-foot Parshall flume flow.
2. Add the amount pumped by Davidson.
3. Multiply the total by 90 percent to account for losses.
4. Subtract the deliveries to other shareholders (Davidson, Nelson, Shiba, Spady, and Waldroupe).
5. The difference is the amount flowing through Wasteway No. 3.

Please call if you have any questions.

Sincerely yours,

HELTON & WILLIAMSEN, P.C.

Thomas A. Williamsen

RE: Notice of Delivery to the Offset Account in John Martin Reservoir

Dear Mr. Pope:

The purpose of this letter is to provide the notice required by paragraph 3 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Resolution") of a delivery of water to the Offset Account. This letter provides the monthly reporting of deliveries to the Offset Account from the Lower Arkansas Water Management Association (LAWMA) shares of the Highland Irrigation Company using the procedures described in my letter of August 10, 1998 which provided the initial notice of the delivery of water from this replacement source for the current year. This report provides the information for the month of August, 1998.

Enclosure 1 contains the accounting spreadsheet for the month of August, 1998. The format of this spreadsheet is provided and described in my letter of August 25, 1997. Enclosure 2 contains the accounting sheet for the Offset Account for August which reflects the delivery of the quantities reported in Enclosure 1 to the appropriate subaccounts of the Offset Account.

The following table summarizes the delivery of water into the Offset Account during the reporting period. As stated in my August 25, 1997 letter, the return flow water is being stored in the Offset Account for delivery to conservation storage in John Martin Reservoir during the months of December (1998) and January (1999).

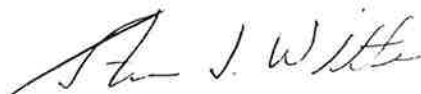

MONTH	C. U. Water (ac-ft)	Return Flow (ac-ft)
August	1285.6	57.79

Please contact me if you have any questions or require additional information.

David L. Pope
September 2, 1997

RE: Notice of Delivery to the Offset Account in John Martin Reservoir

Dear Mr. Pope:

The purpose of this letter is to provide the notice required by paragraph 3 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Resolution") of a delivery of water to the Offset Account. This letter provides the monthly reporting of deliveries to the Offset Account from the Lower Arkansas Water Management Association (LAWMA) shares of the Highland Irrigation Company using the procedures described in my letter of August 10, 1998 which provided the initial notice of the delivery of water from this replacement source for the current year. This report provides the information for the month of September, 1998.

Enclosure 1 contains the accounting spreadsheet for the month of September, 1998. The format of this spreadsheet is provided and described in my letter of August 25, 1997. Enclosure 2 contains the accounting sheet for the Offset Account for September which reflects the delivery of the quantities reported in Enclosure 1 to the appropriate subaccounts of the Offset Account.

The following table summarizes the delivery of water into the Offset Account during the reporting period. As stated in my August 25, 1997 letter, the return flow water is being stored in the Offset Account for delivery to conservation storage in John Martin Reservoir during the months of December (1998) and January (1999).

MONTH	C. U. Water (ac-ft)	Return Flow (ac-ft)
September	536.91	24.14

Please contact me if you have any questions or require additional information.

David L. Pope
October 15, 1998

RE: Notice of Delivery to the Offset Account in John Martin Reservoir

Dear Mr. Pope:

The purpose of this letter is to provide the notice required by paragraph 3 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Resolution") of a delivery of water to the Offset Account. This letter provides the monthly reporting of deliveries to the Offset Account from the Lower Arkansas Water Management Association (LAWMA) shares of the Highland Irrigation Company using the procedures described in my letter of August 10, 1998 which provided the initial notice of the delivery of water from this replacement source for the current year. This report provides the information for the month of October, 1998.

Enclosure 1 contains the accounting spreadsheet for the month of October, 1998. The format of this spreadsheet is provided and described in my letter of August 25, 1997. Enclosure 2 contains the accounting sheet for the Offset Account for October which reflects the delivery of the quantities reported in Enclosure 1 to the appropriate subaccounts of the Offset Account.

The following table summarizes the delivery of water into the Offset Account during the reporting period. As stated in my August 25, 1997 letter, the return flow water is being stored in the Offset Account for delivery to conservation storage in John Martin Reservoir during the months of December (1998) and January (1999).

MONTH	C. U. Water (ac-ft)	Return Flow (ac-ft)
October	1251.71	56.24

Please contact me if you have any questions or require additional information.

David L. Pope
November 12, 1998

RE: Report of Colorado Pumping and Offset Account Operations by Substitute Water Supply Plans for the Period April 1, 1997 to October 31, 1997

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide a report of the operations of three Substitute Water Supply Plans (SWSP) approved by the Colorado State Engineer which have been required to deliver a portion of their replacement water to the Offset Account created by the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping** dated March 17, 1997 ("Resolution"). This requirement is based on the fact that the depletions caused by the operations covered by these plans are estimated to produce depletions to usable Stateline flow during some months of the year. This letter reports the monthly estimated depletions to usable Stateline flow caused by the operations covered by each plan and accounts for the replacement of these estimated depletions using the credits obtained from the delivery of totally consumable water from the Offset Account to Kansas.

The following table shows the estimated depletions for each of the SWSPs which the Colorado State Engineer has required be replaced using water delivered to the Offset Account.

Month	Brad Cummings Irrigation	Carder, Inc Gravel Pit	Midwestern Farms Gravel Pit
April	14	1.69	0
May	41	2.15	3.756
June	62	2.51	3.945
July	72	1.95	4.083
August	93	1.68	4.393
September	112	1.47	4.948
October	108	1.23	6.147
TOTAL	502	12.68	27.272

Enclosure 1 through Enclosure 3 provide the accounting for each of the SWSPs summarized in the above table. The total depletions from the above table are 541.952 acre-feet. Using the usability factor for the irrigation season, the estimated depletions to usable stateline flow resulting from these depletions are 443.859 acre-feet. The replacement of 443.859 acre-feet in the required reaches of the Arkansas River would require a release of 447.4 acre-feet from the Offset Account. These computations are summarized in the table in Enclosure 4. Applying the remaining credit from previous deliveries of consumable water determined in my December 1, 1997 letter, a portion of the credit of 1154.75 acre-feet of consumable water which was released earlier this year was credited as replacement of these depletions. As a result, the remaining credit from previous releases of consumable water produced a remaining credit at the Stateline of 615.4 acre-feet.

Please contact me if you have any questions or require additional information.

Sincerely,

Steven J. Witte
Division Engineer
Colorado Division of Water Resources

RE: Monthly Report of Colorado Pumping and Offset Account Operations for November, 1997

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide the monthly report required by paragraph 12 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping** dated March 17, 1997 ("Resolution"). This letter reports the monthly pumping in excess of Colorado's pre-Compact entitlement, Colorado's monthly accounting of Compact compliance, and the status of water delivered to the Offset Account, all during the month of November, 1997.

Table 1 shows the amount of pumping during the month of November, 1997 by irrigation wells pumping from the Valley Fill Aquifer and surficial aquifers along the Arkansas River between Pueblo and the Stateline, as well as the corresponding wellhead depletions, by user group. The wellhead depletions were computed using the presumptive stream depletions in Rule 4.2 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") approved in Case No. 95CW211.

Table 2 shows the wellhead depletions due to pumping by irrigation wells in the user groups below John Martin Reservoir that is in excess of the pre-Compact entitlements.

Since the depletions caused by pumping above John Martin Reservoir were fully replaced, and that accounting has been provided to Kansas, and the depletions caused by pumping below John Martin Reservoir which affect senior surface water rights in Colorado were fully replaced, and that accounting has been provided to Kansas, the accounting in this report shows only remaining depletions caused by irrigation pumping in excess of the pre-Compact entitlements for those

river reaches where no replacements or only partial replacements were made to replace out-of-priority depletions to senior surface water rights in Colorado.

Table 3 shows the remaining stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements which were not replaced by making replacements to senior surface water rights in Colorado. These stream depletions were computed using the wellhead depletions shown in Table 2 with the Ground Water Accounting Model. Please note that in Reaches 11, 12, and 13, replacements to senior surface water rights in Colorado replaced 0% of the stream depletions caused by pumping affecting those reaches. This percentage reflects the fact that there was a call by a Colorado surface water right in those three reaches on none of the 30 days during November. Also note that in Reaches 14, 15, and 16, replacements to senior surface water rights in Colorado replaced 0% of the stream depletions caused by pumping affecting those reaches. This percentage reflects the fact that there was a call by a Colorado surface water right in those three reaches on none of the 30 days during November. The remaining depletions shown in Table 3 are the estimated stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements remaining after replacements were made to senior surface water rights in Colorado. Table 3 also shows the estimated depletions to usable Stateline flow, which were calculated using the assumptions in paragraph 5.B. of the Resolution, and the replacements to Stateline flows which were made during the month. Note that 663.3 acre-feet of fully consumable water was required from the Offset Account to replace a portion of the depletions to usable Stateline flow which were estimated to occur during November, 1997. Also, a revised accounting of the replacements for estimated depletions to usable Stateline flows which were made during the month of October, 1997 is attached as Table 4. The only changes from the previously provided table for replacements made during October, 1997 are the use of 138.6 acre-feet of Fry-Ark return flows used to replace depletions in Reaches 11 through 14 caused by qualifying wells and the subsequent reduction in the use of Offset Account water from 1084.5 acre-feet to 945.6 acre-feet. Under the provisions of paragraph 2 of the **Stipulation Re Offset Account in John Martin Reservoir** dated March 17, 1997 ("Stipulation"), a portion of the credit of 2239.25 acre-feet of consumable water which was released earlier this year, as directed by the Kansas Chief Engineer, was credited as replacement of these depletions. At the end of November, 1997, the remaining credit from the previous releases of consumable water produced a credit at the Stateine of 159.2 acre-feet.

As of November 30, 1997, 5327.87 acre-feet of water was being stored in the Offset Account, 3519.87 acre-feet of fully consumable water and 1808.00 acre feet of return flow water.

RE: Monthly Report of Colorado Pumping and Offset Account Operations for December, 1997

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide the monthly report required by paragraph 12 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping** dated March 17, 1997 ("Resolution"). This letter reports the monthly pumping in excess of Colorado's pre-Compact entitlement, Colorado's monthly accounting of Compact compliance, and the status of water delivered to the Offset Account, all during the month of December, 1997.

Table 1 shows the amount of pumping during the month of December, 1997 by irrigation wells pumping from the Valley Fill Aquifer and surficial aquifers along the Arkansas River between Pueblo and the Stateline, as well as the corresponding wellhead depletions, by user group. The wellhead depletions were computed using the presumptive stream depletions in Rule 4.2 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") approved in Case No. 95CW211.

Table 2 shows the wellhead depletions due to pumping by irrigation wells in the user groups below John Martin Reservoir that is in excess of the pre-Compact entitlements.

Since the out of priority depletions caused by pumping above John Martin Reservoir were fully replaced, and that accounting has been provided to Kansas, and since no depletions caused by pumping below John Martin Reservoir which affect senior surface water rights in Colorado needed to be replaced, and that accounting has been provided to Kansas, the accounting in this report shows only remaining depletions caused by irrigation pumping in excess of the pre-

Compact entitlements for those river reaches where no replacements or only partial replacements were made to replace out-of-priority depletions to senior surface water rights in Colorado.

Table 3 shows the remaining stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements which were not replaced by making replacements to senior surface water rights in Colorado. These stream depletions were computed using the wellhead depletions shown in Table 2 with the Ground Water Accounting Model. Please note that in all reaches below John Martin Reservoir replacements to senior surface water rights in Colorado replaced 0% of the stream depletions caused by pumping affecting those reaches. This percentage reflects the fact that there was no call by a Colorado surface water right in those reaches on any of the 31 days during December. The remaining depletions shown in Table 3 are the estimated stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements remaining after replacements were made to senior surface water rights in Colorado. Table 3 also shows the estimated depletions to usable Stateline flow, which were calculated using the assumptions in paragraph 5.B. of the Resolution. Since the measured Stateline flow during December, 1997 was 36550 acre-feet, no replacement water was made available to Kansas under the provisions of paragraph 5.B. of the Resolution. At the end of December, 1997, the remaining credit from the previous releases of consumable water from the Offset Account was the 159.2 acre-feet reported after the replacement operations conducted for November, 1997.

As of December 31, 1997, 5316.12 acre-feet of water was being stored in the Offset Account, 3512.16 acre-feet of fully consumable water and 1803.96 acre feet of return flow water.

RE: Monthly Report of Colorado Pumping and Offset Account Operations for January, 1998

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide the monthly report required by paragraph 12 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping** dated March 17, 1997 ("Resolution"). This letter reports the monthly pumping in excess of Colorado's pre-Compact entitlement, Colorado's monthly accounting of Compact compliance, and the status of water delivered to the Offset Account, all during the month of January, 1998.

Table 1 shows the amount of pumping during the month of January, 1998 by irrigation wells pumping from the Valley Fill Aquifer and surficial aquifers along the Arkansas River between Pueblo and the Stateline, as well as the corresponding wellhead depletions, by user group. The wellhead depletions were computed using the presumptive stream depletions in Rule 4.2 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") approved in Case No. 95CW211.

Table 2 shows the wellhead depletions due to pumping by irrigation wells in the user groups below John Martin Reservoir that is in excess of the pre-Compact entitlements.

Since the out of priority depletions caused by pumping above John Martin Reservoir were fully replaced, and that accounting has been provided to Kansas, and since no depletions caused by pumping below John Martin Reservoir which affect senior surface water rights in Colorado needed to be replaced, and that accounting has been provided to Kansas, the accounting in this report shows only remaining depletions caused by irrigation pumping in excess of the pre-

Compact entitlements for those river reaches where no replacements or only partial replacements were made to replace out-of-priority depletions to senior surface water rights in Colorado.

Table 3 shows the remaining stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements which were not replaced by making replacements to senior surface water rights in Colorado. These stream depletions were computed using the wellhead depletions shown in Table 2 with the Ground Water Accounting Model. Please note that in all reaches below John Martin Reservoir replacements to senior surface water rights in Colorado replaced 0% of the stream depletions caused by pumping affecting those reaches. This percentage reflects the fact that there was no call by a Colorado surface water right in those reaches on any of the 31 days during January. The remaining depletions shown in Table 3 are the estimated stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements remaining after replacements were made to senior surface water rights in Colorado. Table 3 also shows the estimated depletions to usable Stateline flow, which were calculated using the assumptions in paragraph 5.B. of the Resolution. Since the measured Stateline flow during January, 1998 was 63940 acre-feet, no replacement water was made available to Kansas under the provisions of paragraph 5.B. of the Resolution. At the end of January, 1998, the remaining credit from the previous releases of consumable water from the Offset Account was the 159.2 acre-feet reported after the replacement operations conducted for November, 1997.

As of January 31, 1998, no water was being stored in the Offset Account since the entire contents of the account was spilled from January 14 through January 17. The accounting spreadsheet at Enclosure 1 summarizes the activity of the Offset Account during January, 1998.

Please contact me if you have any questions or require additional information.

Sincerely,

Steven J. Witte

RE: Monthly Report of Colorado Pumping and Offset Account Operations for February, 1998

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide the monthly report required by paragraph 12 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping** dated March 17, 1997 ("Resolution"). This letter reports the monthly pumping in excess of Colorado's pre-Compact entitlement, Colorado's monthly accounting of Compact compliance, and the status of water delivered to the Offset Account, all during the month of February, 1998.

Table 1 shows the amount of pumping during the month of February, 1998 by irrigation wells pumping from the Valley Fill Aquifer and surficial aquifers along the Arkansas River between Pueblo and the Stateline, as well as the corresponding wellhead depletions, by user group. The wellhead depletions were computed using the presumptive stream depletions in Rule 4.2 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") approved in Case No. 95CW211.

Table 2 shows the wellhead depletions due to pumping by irrigation wells in the user groups below John Martin Reservoir that are in excess of the pre-Compact entitlements.

Since the out of priority depletions caused by pumping above John Martin Reservoir were fully replaced, and that accounting has been provided to Kansas, and since no depletions caused by pumping below John Martin Reservoir which affect senior surface water rights in Colorado needed to be replaced, and that accounting has been provided to Kansas, the accounting in this report shows only remaining depletions caused by irrigation pumping in excess of the pre-

Compact entitlements for those river reaches where no replacements or only partial replacements were made to replace out-of-priority depletions to senior surface water rights in Colorado.

Table 3 shows the remaining stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements which were not replaced by making replacements to senior surface water rights in Colorado. These stream depletions were computed using the wellhead depletions shown in Table 2 with the Ground Water Accounting Model. Please note that in all reaches below John Martin Reservoir replacements to senior surface water rights in Colorado replaced 0% of the stream depletions caused by pumping affecting those reaches. This percentage reflects the fact that there was no call by a Colorado surface water right in those reaches on any of the 28 days during February. The remaining depletions shown in Table 3 are the estimated stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements remaining after replacements were made to senior surface water rights in Colorado. Table 3 also shows the estimated depletions to usable Stateline flow, which were calculated using the assumptions in paragraph 5.B. of the Resolution. Since the measured Stateline flow during February, 1998 was 31370 acre-feet, no replacement water was made available to Kansas under the provisions of paragraph 5.B. of the Resolution. At the end of February, 1998, the remaining credit from the previous releases of consumable water from the Offset Account was the 159.2 acre-feet reported after the replacement operations conducted for November, 1997.

As of February 28, 1998, no water was being stored in the Offset Account since the entire contents of the account was spilled from January 14 through January 17, 1998.

RE: Monthly Report of Colorado Pumping and Offset Account Operations for March, 1998

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide the monthly report required by paragraph 12 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping** dated March 17, 1997 ("Resolution"). This letter reports the monthly pumping in excess of Colorado's pre-Compact entitlement, Colorado's monthly accounting of Compact compliance, and the status of water delivered to the Offset Account, all during the month of March, 1998.

Table 1 shows the amount of pumping during the month of March, 1998 by irrigation wells pumping from the Valley Fill Aquifer and surficial aquifers along the Arkansas River between Pueblo and the Stateline, as well as the corresponding wellhead depletions, by user group. The wellhead depletions were computed using the presumptive stream depletions in Rule 4.2 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") approved in Case No. 95CW211.

Table 2 shows the wellhead depletions due to pumping by irrigation wells in the user groups below John Martin Reservoir that are in excess of the pre-Compact entitlements.

Since the out of priority depletions caused by pumping above John Martin Reservoir were fully replaced, and that accounting has been provided to Kansas, and since no depletions caused by pumping below John Martin Reservoir which affect senior surface water rights in Colorado needed to be replaced, and that accounting has been provided to Kansas, the accounting in this report shows only remaining depletions caused by irrigation pumping in excess of the pre-

Compact entitlements for those river reaches where no replacements or only partial replacements were made to replace out-of-priority depletions to senior surface water rights in Colorado.

Table 3 shows the remaining stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements which were not replaced by making replacements to senior surface water rights in Colorado. These stream depletions were computed using the wellhead depletions shown in Table 2 with the Ground Water Accounting Model. Please note that in all reaches below John Martin Reservoir replacements to senior surface water rights in Colorado replaced 0% of the stream depletions caused by pumping affecting those reaches. This percentage reflects the fact that there was no call by a Colorado surface water right in those reaches on any of the 31 days during March. The remaining depletions shown in Table 3 are the estimated stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements remaining after replacements were made to senior surface water rights in Colorado. Table 3 also shows the estimated depletions to usable Stateline flow, which were calculated using the assumptions in paragraph 5.B. of the Resolution. Since the measured Stateline flow during March, 1998 was 42619 acre-feet, no replacement water was made available to Kansas under the provisions of paragraph 5.B. of the Resolution. At the end of March, 1998, the remaining credit from the previous releases of consumable water from the Offset Account was the 159.2 acre-feet reported after the replacement operations conducted for November, 1997.

As of March 31, 1998, no water was being stored in the Offset Account since the entire contents of the account was spilled from January 14 through January 17, 1998.

Please contact me if you have any questions or require additional information.

RE: Monthly Report of Colorado Pumping and Offset Account Operations for April, 1998

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide the monthly report required by paragraph 12 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Resolution"). This letter reports the monthly pumping in excess of Colorado's pre-Compact entitlement, Colorado's monthly accounting of Compact compliance, and the status of water delivered to the Offset Account, all during the month of April, 1998.

Table 1 shows the amount of pumping during the month of April, 1998 by irrigation wells pumping from the Valley Fill Aquifer and surficial aquifers along the Arkansas River between Pueblo and the Stateline, as well as the corresponding wellhead depletions, by user group. The wellhead depletions were computed using the presumptive stream depletions in Rule 4.2 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") approved in Case No. 95CW211.

Table 2 shows the wellhead depletions due to pumping by irrigation wells in the user groups below John Martin Reservoir that are in excess of the pre-Compact entitlements.

Since the out of priority depletions caused by pumping above John Martin Reservoir were fully replaced, and that accounting has been provided to Kansas, and since no depletions caused by pumping below John Martin Reservoir which affect senior surface water rights in Colorado needed to be replaced, and that accounting has been provided to Kansas, the accounting in this report shows only remaining depletions caused by irrigation pumping in excess of the pre-

Compact entitlements for those river reaches where no replacements or only partial replacements were made to replace out-of-priority depletions to senior surface water rights in Colorado.

Table 3 shows the remaining stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements which were not replaced by making replacements to senior surface water rights in Colorado. These stream depletions were computed using the wellhead depletions shown in Table 2 with the Ground Water Accounting Model. Please note that in all reaches below John Martin Reservoir replacements to senior surface water rights in Colorado replaced 0% of the stream depletions caused by pumping affecting those reaches. This percentage reflects the fact that there was no call by a Colorado surface water right in those reaches on any of the 30 days during April. The remaining depletions shown in Table 3 are the estimated stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements remaining after replacements were made to senior surface water rights in Colorado. Table 3 also shows the estimated depletions to usable Stateline flow which were calculated using the assumptions in paragraph 5.B. of the Resolution. Since the measured Stateline flow during April, 1998 was 59584 acre-feet, 9.9% of the estimated depletions in each reach was replaced in the reach where the depletions occurred. At the end of April, 1998, the remaining credit from the previous releases of consumable water from the Offset Account was the 159.2 acre-feet reported after the replacement operations conducted for November, 1997.

As of April 30, 1998, no water was being stored in the Offset Account since the entire contents of the account was spilled from January 14 through January 17, 1998. The 500 acre-feet to be used for the storage charge was being stored in Meredith Reservoir for delivery to the Offset Account on a date to be determined under the provisions of the letter attached at Enclosure 1.

Please contact me if you have any questions or require additional information.

Sincerely,

Steven J. Witte
Division Engineer
Colorado Division of Water Resources

Dear Mr. Simpson:

Thank you for your letter dated April 1, 1998, regarding the storage of 500 acre-feet of fully consumable water in Lake Meredith for the subsequent delivery to the offset account in John Martin Reservoir after April 1, 1998, in accordance with the recent amendment of the Offset Account resolution.

I agree with the proposal and am returning for your records a signed copy of your letter dated April 1, 1998., setting forth the conditions of the proposal.

Thank you very much.

Sincerely yours,

David L. Pope, P.E.

RE: Delivery of 500 Acre-Feet to the Offset Account

Dear David:

In accordance with paragraph 9 of the Offset Account Resolution, as amended March 30, 1998 pursuant to action at the Special Arkansas River Compact Administration meeting on March 25, the Lower Arkansas Water Management Association ("LAWMA") has offered to deliver 500 acre-feet of fully consumable water stored in Lake Meredith to the Offset Account after April 1 on the following terms:

1. The water will be released from Lake Meredith and delivered to the Offset Account at a time after April 1 when the Division Engineer for Water Division 2 (Steve Witte) and the Water Commissioner for the Garden City Field Office (Mark Rude) agree that the risk that the 500 acre-feet will spill has passed, taking into consideration river flows upstream from John Martin Reservoir, snow pack in the Arkansas River Basin in Colorado, and reservoir content; provided that if the water has not been earlier released as provided above, the water shall be released from Lake Meredith and delivered to the Offset Account as soon after August 15, 1998 as space is available in John Martin Reservoir and the Reservoir is not spilling;
2. In addition to the 500 acre-feet of fully consumable water stored in Lake Meredith, LAWMA will provide sufficient water for transit losses to deliver the water to John Martin Reservoir.

David L. Pope
April 1, 1998

Page 2

This proposal for delivery of the 500 acre-feet after April 1 is acceptable to me. If you agree with this proposal, please confirm your agreement as soon as possible.

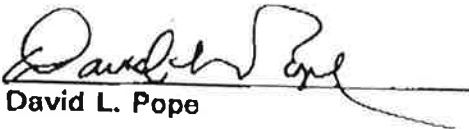

Very truly yours,

Hal D. Simpson
State Engineer

RE: Monthly Report of Colorado Pumping and Offset Account Operations for May, 1998

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide the monthly report required by paragraph 12 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Resolution"). This letter reports the monthly pumping in excess of Colorado's pre-Compact entitlement, Colorado's monthly accounting of Compact compliance, and the status of water delivered to the Offset Account, all during the month of May, 1998.

Table 1 shows the amount of pumping during the month of May, 1998 by irrigation wells pumping from the Valley Fill Aquifer and surficial aquifers along the Arkansas River between Pueblo and the Stateline, as well as the corresponding wellhead depletions, by user group. The wellhead depletions were computed using the presumptive stream depletions in Rule 4.2 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") approved in Case No. 95CW211.

Table 2 shows the wellhead depletions due to pumping by irrigation wells in the user groups below John Martin Reservoir that are in excess of the pre-Compact entitlements.

Since the depletions caused by pumping above John Martin Reservoir were fully replaced, and that accounting has been provided to Kansas, and the depletions caused by pumping below John Martin Reservoir which affect senior surface water rights in Colorado were fully replaced, and that accounting has been provided to Kansas, the accounting in this report shows only remaining depletions caused by irrigation pumping in excess of the pre-Compact entitlements for those

river reaches where no replacements or only partial replacements were made to replace out-of-priority depletions to senior surface water rights in Colorado.

Table 3 shows the remaining stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements which were not replaced by making replacements to senior surface water rights in Colorado. These stream depletions were computed using the wellhead depletions shown in Table 2 with the Ground Water Accounting Model. Please note that in Reaches 14, 15, and 16, replacements to senior surface water rights in Colorado replaced 0% of the stream depletions caused by pumping affecting those reaches. This percentage reflects the fact that there was a call by a Colorado surface water right in those three reaches on none of the 31 days during May. The remaining depletions shown in Table 3 are the estimated stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements remaining after replacements were made to senior surface water rights in Colorado. Table 3 also shows the estimated depletions to usable Stateline flow which were calculated using the assumptions in paragraph 5.B of the Resolution, and the replacements to Stateline flows which were made during the month. At the end of May, 1998, the remaining credit from the previous releases of consumable water from the Offset Account was the 159.2 acre-feet reported after the replacement operations conducted for November, 1997.

As of May 31, 1998, no water was being stored in the Offset Account since the entire contents of the account was spilled from January 14 through January 17, 1998. The 500 acre-feet to be used for the storage charge was being stored in Meredith Reservoir for delivery to the Offset Account on a date to be determined by me and Mark Rude.

Please contact me if you have any questions or require additional information.

RE: Monthly Report of Colorado Pumping and Offset Account Operations for June, 1998

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide the monthly report required by paragraph 12 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Resolution"). This letter reports the monthly pumping in excess of Colorado's pre-Compact entitlement, Colorado's monthly accounting of Compact compliance, and the status of water delivered to the Offset Account, all during the month of June, 1998.

Table 1 shows the amount of pumping during the month of June, 1998 by irrigation wells pumping from the Valley Fill Aquifer and surficial aquifers along the Arkansas River between Pueblo and the Stateline, as well as the corresponding wellhead depletions, by user group. The wellhead depletions were computed using the presumptive stream depletions in Rule 4.2 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") approved in Case No. 95CW211.

Table 2 shows the wellhead depletions due to pumping by irrigation wells in the user groups below John Martin Reservoir that are in excess of the pre-Compact entitlements.

Since the depletions caused by pumping above John Martin Reservoir were fully replaced, and that accounting has been provided to Kansas, and the depletions caused by pumping below John Martin Reservoir which affect senior surface water rights in Colorado were fully replaced, and that accounting has been provided to Kansas, the accounting in this report shows only remaining depletions caused by irrigation pumping in excess of the pre-Compact entitlements for those

river reaches where no replacements or only partial replacements were made to replace out-of-priority depletions to senior surface water rights in Colorado.

Table 3 shows the remaining stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements which were not replaced by making replacements to senior surface water rights in Colorado. These stream depletions were computed using the wellhead depletions shown in Table 2 with the Ground Water Accounting Model. Please note that in Reaches 14, 15, and 16, replacements to senior surface water rights in Colorado replaced 33.3% of the stream depletions caused by pumping affecting those reaches. This percentage reflects the fact that there was a call by a Colorado surface water right in those three reaches on 10 of the 30 days during June. The remaining depletions shown in Table 3 are the estimated stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements remaining after replacements were made to senior surface water rights in Colorado. Table 3 also shows the estimated depletions to usable Stateline flow which were calculated using the assumptions in paragraph 5.B of the Resolution, and the replacements to Stateline flows which were made during the month. At the end of June, 1998, the remaining credit from the previous releases of consumable water from the Offset Account was the 159.2 acre-feet reported after the replacement operations conducted for November, 1997.

A delivery of water to the Offset Account was started during the month of June, 1998. This delivery was described in my letter to the Kansas Chief Engineer dated June 30, 1998 and netted 1353.76 acre-feet of fully consumable water into the Offset Account when completed on July 2, 1998. The first 500 acre-feet of this delivery was placed in the Kansas Storage Charge subaccount of the Offset Account. The remaining 853.76 acre-feet was placed in the Colorado Consumable Water subaccount. As of June 30, 1998, there were 701.69 acre-feet being stored in the offset account.

Please contact me if you have any questions or require additional information.

RE: Monthly Report of Colorado Pumping and Offset Account Operations for July, 1998

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide the monthly report required by paragraph 12 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Resolution"). This letter reports the monthly pumping in excess of Colorado's pre-Compact entitlement, Colorado's monthly accounting of Compact compliance, and the status of water delivered to the Offset Account, all during the month of July, 1998.

Table 1 shows the amount of pumping during the month of July, 1998 by irrigation wells pumping from the Valley Fill Aquifer and surficial aquifers along the Arkansas River between Pueblo and the Stateline, as well as the corresponding wellhead depletions, by user group. The wellhead depletions were computed using the presumptive stream depletions in Rule 4.2 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") approved in Case No. 95CW211.

Table 2 shows the wellhead depletions due to pumping by irrigation wells in the user groups below John Martin Reservoir that are in excess of the pre-Compact entitlements.

Since the depletions caused by pumping above John Martin Reservoir were fully replaced, and that accounting has been provided to Kansas, and the depletions caused by pumping below John Martin Reservoir which affect senior surface water rights in Colorado were fully replaced, and that accounting has been provided to Kansas, the accounting in this report shows only remaining depletions caused by irrigation pumping in excess of the pre-Compact entitlements for those

river reaches where no replacements or only partial replacements were made to replace out-of-priority depletions to senior surface water rights in Colorado.

Table 3 shows the remaining stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements which were not replaced by making replacements to senior surface water rights in Colorado. These stream depletions were computed using the wellhead depletions shown in Table 2 with the Ground Water Accounting Model. Please note that in Reaches 11, 12, and 13, replacements to senior surface water rights in Colorado replaced 90% of the stream depletions caused by pumping affecting those reaches. Also note that in Reaches 14, 15, and 16, replacements to senior surface water rights in Colorado replaced 23% of the stream depletions caused by pumping affecting those reaches. These percentages reflect the fact that there was a call by a Colorado surface water right in those reaches on 28 and 7 days respectively out of the 31 days during July. The remaining depletions shown in Table 3 are the estimated stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements remaining after replacements were made to senior surface water rights in Colorado. Table 3 also shows the estimated depletions to usable Stateline flow which were calculated using the assumptions in paragraph 5.B of the Resolution, and the replacements to Stateline flows which were made during the month. At the end of July, 1998, the remaining credit from the previous releases of consumable water from the Offset Account was the 159.2 acre-feet reported after the replacement operations conducted for November, 1997.

A delivery of water to the Offset Account was started during the month of July, 1998 by LAWMA using consumptive use credits from their ownership in the Highland Canal. This delivery was described in my letter to the Kansas Chief Engineer dated August 10, 1998 and netted 477.61 acre-feet of fully consumable water and 21.43 acre-feet of return flow water into the Offset Account by the end of July, 1998. As of July 31, 1998, there were 1810.7 acre-feet being stored in the offset account.

Please contact me if you have any questions or require additional information.

RE: Monthly Report of Colorado Pumping and Offset Account Operations for August, 1998

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide the monthly report required by paragraph 12 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Resolution"). This letter reports the monthly pumping in excess of Colorado's pre-Compact entitlement, Colorado's monthly accounting of Compact compliance, and the status of water delivered to the Offset Account, all during the month of August, 1998.

Table 1 shows the amount of pumping during the month of August, 1998 by irrigation wells pumping from the Valley Fill Aquifer and surficial aquifers along the Arkansas River between Pueblo and the Stateline, as well as the corresponding wellhead depletions, by user group. The wellhead depletions were computed using the presumptive stream depletions in Rule 4.2 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") approved in Case No. 95CW211.

Table 2 shows the wellhead depletions due to pumping by irrigation wells in the user groups below John Martin Reservoir that are in excess of the pre-Compact entitlements.

Since the depletions caused by pumping above John Martin Reservoir were fully replaced, and that accounting has been provided to Kansas, and the depletions caused by pumping below John Martin Reservoir which affect senior surface water rights in Colorado were fully replaced, and that accounting has been provided to Kansas, the accounting in this report shows only remaining depletions caused by irrigation pumping in excess of the pre-Compact entitlements for those

river reaches where no replacements or only partial replacements were made to replace out-of-priority depletions to senior surface water rights in Colorado.

Table 3 shows the remaining stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements which were not replaced by making replacements to senior surface water rights in Colorado. These stream depletions were computed using the wellhead depletions shown in Table 2 with the Ground Water Accounting Model. Please note that in Reaches 11, 12, and 13, replacements to senior surface water rights in Colorado replaced 68% of the stream depletions caused by pumping affecting those reaches. Also note that in Reaches 14, 15, and 16, replacements to senior surface water rights in Colorado replaced 23% of the stream depletions caused by pumping affecting those reaches. These percentages reflect the fact that there was a call by a Colorado surface water right in those reaches on 21 and 7 days respectively out of the 31 days during August. The remaining depletions shown in Table 3 are the estimated stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements remaining after replacements were made to senior surface water rights in Colorado. Table 3 also shows the estimated depletions to usable Stateline flow which were calculated using the assumptions in paragraph 5.B of the Resolution, and the replacements to Stateline flows which were made during the month. At the end of August, 1998, the remaining credit from the previous releases of consumable water from the Offset Account was the 159.2 acre-feet reported after the replacement operations conducted for November, 1997.

A delivery of water to the Offset Account was continued during the month of August, 1998 by LAWMA using consumptive use credits from their ownership in the Highland Canal. This delivery was described in my letter to the Kansas Chief Engineer dated September 2, 1998 and netted 1285.6 acre-feet of fully consumable water and 57.79 acre-feet of return flow water into the Offset Account by the end of August, 1998. As of August 31, 1998, there were 3099.99 acre-feet being stored in the offset account.

Please contact me if you have any questions or require additional information.

RE: Monthly Report of Colorado Pumping and Offset Account Operations for September, 1998

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide the monthly report required by paragraph 12 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Resolution"). This letter reports the monthly pumping in excess of Colorado's pre-Compact entitlement, Colorado's monthly accounting of Compact compliance, and the status of water delivered to the Offset Account, all during the month of September, 1998.

Table 1 shows the amount of pumping during the month of September, 1998 by irrigation wells pumping from the Valley Fill Aquifer and surficial aquifers along the Arkansas River between Pueblo and the Stateline, as well as the corresponding wellhead depletions, by user group. The wellhead depletions were computed using the presumptive stream depletions in Rule 4.2 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") approved in Case No. 95CW211.

Table 2 shows the wellhead depletions due to pumping by irrigation wells in the user groups below John Martin Reservoir that are in excess of the pre-Compact entitlements.

Since the depletions caused by pumping above John Martin Reservoir were fully replaced, and that accounting has been provided to Kansas, and the depletions caused by pumping below John Martin Reservoir which affect senior surface water rights in Colorado were fully replaced, and that accounting has been provided to Kansas, the accounting in this report shows only remaining depletions caused by irrigation pumping in excess of the pre-Compact entitlements for those

river reaches where no replacements or only partial replacements were made to replace out-of-priority depletions to senior surface water rights in Colorado.

Table 3 shows the remaining stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements which were not replaced by making replacements to senior surface water rights in Colorado. These stream depletions were computed using the wellhead depletions shown in Table 2 with the Ground Water Accounting Model. Please note that in Reaches 11, 12, and 13, replacements to senior surface water rights in Colorado replaced 100% of the stream depletions caused by pumping affecting those reaches. Also note that in Reaches 14, 15, and 16, replacements to senior surface water rights in Colorado replaced 37% of the stream depletions caused by pumping affecting those reaches. These percentages reflect the fact that there was a call by a Colorado surface water right in those reaches on 30 and 11 days respectively out of the 30 days during September. The remaining depletions shown in Table 3 are the estimated stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements remaining after replacements were made to senior surface water rights in Colorado. Table 3 also shows the estimated depletions to usable Stateline flow which were calculated using the assumptions in paragraph 5.B of the Resolution, and the replacements to Stateline flows which were made during the month. At the end of September, 1998, the remaining credit from the previous releases of consumable water from the Offset Account was reduced to zero after revision of the replacement operations conducted for November, 1997 as part of the preparation of the Arkansas River Replacement Plan Year End Report for LAWMA for the 1997-1998 plan year.

A delivery of water to the Offset Account was continued during the month of September, 1998 by LAWMA using consumptive use credits from their ownership in the Highland Canal. This delivery was described in my letter to the Kansas Chief Engineer dated October 15, 1998 and netted 536.91 acre-feet of fully consumable water and 24.14 acre-feet of return flow water into the Offset Account by the end of September, 1998. As of September 30, 1998, there were 3592.58 acre-feet being stored in the offset account.

Please contact me if you have any questions or require additional information.

RE: Monthly Report of Colorado Pumping and Offset Account Operations for October, 1998

Dear Mr. Pope and Ms. Clay:

The purpose of this letter is to provide the monthly report required by paragraph 12 of the **Resolution Concerning an Offset Account in John Martin Reservoir for Colorado Pumping As Amended March 30, 1998** ("Resolution"). This letter reports the monthly pumping in excess of Colorado's pre-Compact entitlement, Colorado's monthly accounting of Compact compliance, and the status of water delivered to the Offset Account, all during the month of October, 1998.

Table 1 shows the amount of pumping during the month of October, 1998 by irrigation wells pumping from the Valley Fill Aquifer and surficial aquifers along the Arkansas River between Pueblo and the Stateline, as well as the corresponding wellhead depletions, by user group. The wellhead depletions were computed using the presumptive stream depletions in Rule 4.2 of the **AMENDED RULES AND REGULATIONS GOVERNING THE DIVERSION AND USE OF TRIBUTARY GROUND WATER IN THE ARKANSAS RIVER BASIN, COLORADO** ("Rules") approved in Case No. 95CW211.

Table 2 shows the wellhead depletions due to pumping by irrigation wells in the user groups below John Martin Reservoir that are in excess of the pre-Compact entitlements.

Since the depletions caused by pumping above John Martin Reservoir were fully replaced, and that accounting has been provided to Kansas, and the depletions caused by pumping below John Martin Reservoir which affect senior surface water rights in Colorado were fully replaced, and that accounting has been provided to Kansas, the accounting in this report shows only remaining depletions caused by irrigation pumping in excess of the pre-Compact entitlements for those

river reaches where no replacements or only partial replacements were made to replace out-of-priority depletions to senior surface water rights in Colorado.

Table 3 shows the remaining stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements which were not replaced by making replacements to senior surface water rights in Colorado. These stream depletions were computed using the wellhead depletions shown in Table 2 with the Ground Water Accounting Model. Please note that in Reaches 11, 12, and 13, replacements to senior surface water rights in Colorado replaced 100% of the stream depletions caused by pumping affecting those reaches. Also note that in Reaches 14, 15, and 16, replacements to senior surface water rights in Colorado replaced 0% of the stream depletions caused by pumping affecting those reaches. These percentages reflect the fact that there was a call by a Colorado surface water right in those reaches on 31 and 0 days respectively out of the 31 days during October. The remaining depletions shown in Table 3 are the estimated stream depletions caused by irrigation pumping in excess of the pre-Compact entitlements remaining after replacements were made to senior surface water rights in Colorado. Table 3 also shows the estimated depletions to usable Stateline flow which were calculated using the assumptions in paragraph 5.B of the Resolution, and the replacements to Stateline flows which were made during the month.

A delivery of water to the Offset Account was continued during the month of October, 1998 by LAWMA using consumptive use credits from their ownership in the Highland Canal. This delivery was described in my letter to the Kansas Chief Engineer dated November 12, 1998 and netted 1251.71 acre-feet of fully consumable water and 56.24 acre-feet of return flow water into the Offset Account by the end of October, 1998. As of October 31, 1998, there were 4848.68 acre-feet being stored in the offset account.

Please contact me if you have any questions or require additional information.
